

I'm not robot

Continue

guy is correct, and this thread is not the place to ask for support either. The discord server is the place to go with all the questions. How do I use the package? I downloaded it, but now I don't know how to use it. See the first half of my message Hola el antlion larva banner no se ve visualmente con el paquete alguno mas le pasa o es solo a mi, habra alguna solucion? Hola el antlion larva banner no se ve visualmente con el paquete alguno mas le pasa o es solo a mi, habra alguna solucion? Hola el antlion larva banner no se ve visualmente con el paquete alguno mas le pasa o es solo a mi, habra alguna solucion? Gracias is there a way to get the texture pack without using discord? (looking for a download that doesn't use discord) is there a way to get the texture pack without using discord? (looking for a download that does not use discord) As I said, the forum post is obsolete. You're going to have to use discord. The reason we can't update this is that the poster is no longer a team member, and moderators can't edit someone else's post. looks good, so I think I rate a good rating due to how good it looks) (oof.. it looks like I can't get the package... looks good, so I think I classify this as a good rating due to how good it looks) Is there any reason why you don't get discord? Could I ask one of the moderators to put an updated version in the comments? I find the site very disused..... I used it once, but not now. I have my own opinions... I was on the terraria server once, but my account is left behind..... So yes..... I only use the forum and steam discussions to discuss Terraria Hmm... Strange. It doesn't look like that in my game. Some of the textures. The inventory seems superior in the screenshots, but nothing changes in mine. In addition, the stone platform is missing / It's invisible when I give it to you. Hmm... Strange. It doesn't look like that in my game. Some of the textures. The inventory seems superior in the screenshots, but nothing changes in mine. In addition, the stone platform is missing / It's invisible when I give it to you. Have you downloaded the package from the forums or the discord server? Because the forum post has long been outdated. Although missing sprites in 1.4 is very well known Page 10 I downloaded the forum thingy post. I rarely use discord. I'm going to try to get there now. And yes, stairs apparently, and some platforms are missing when I use this texture pack. Why does this happen? Thanks in advance for information! I hope to get into some modding myself. I downloaded the forum post. I rarely use discord. I'm going to try to get there now. And yes, stairs apparently, and some platforms are missing when I use this texture pack. Why does this happen? Thanks in advance for information! I hope to get into some modding myself. All platforms use same image file. So if the file is 1.3.5.3, the 1.4 platforms won't be there. I downloaded the forum post. I rarely use discord. I'm going to try to get there now. And yes, stairs apparently, and some platforms are missing when I use this texture pack. Why does this happen? Thanks in advance for information! I hope to get into some modding myself. The download of the post-download forum is years. It should NOT be used Allright. Thanks for the clarification! I found the discord server through Google, and managed to get the texture pack from there. I get it now. I tried it and I like the level of detail. However, dirt and wood are very dark, and I think the sand and marble blocks should be changed a bit. Everything looks great. Why would you make a discord server a requirement to get the file updated? This is annoying extra IMO steps. V1tell, the creator of the thread, is no longer a member of our team, so it does not update the thread. The server also has a support channel and notifications for those who want to know when updates come out. Last edit: Jun 11, 2020 yall changed the npc's? I hope not, because I have a kobold texture pack downloaded. Help! I'm putting the Zip folder in documents > MyGames > Terraria > ResourcePacks, but it's not showing up in the game settings. What the hell am I doing wrong!?!? Support is offered on the discord server. I'm pretty sure you didn't download the package from there either. The download of the forum post has never been updated Support is offered on the discord server. I'm pretty sure you didn't download the package from there either. The download of the forum post has never been updated AHHH so I have to download it on the server for it to work? I'll try this, then edit: It worked! Thanks, have everyone changed the npc's? I hope not, because I have a kobold texture pack downloaded. Place the Kobold texture pack at the top and your kobolds will always appear regardless of what other packages you are using. I found some bugs, here is a list Mobs that I found that only has an updated sprite when dead and gore is in: - Soul Eater -Skeleton -Blood Crawler (walking) -(Probably) Queen Bee -Eater of Worlds, the sprite appears, but the gore does not match items that do not have an updated sprite: -Wood Helmet -Carnesim Helmet I'll keep it updated as I find them updated. Last edit: Jun 19, 2020 Page 11 I found some bugs, here is a list Mobs I found that only has an updated sprite dead and gore is in: - Soul Eater -Skeleton -Blood Crawler (walking) -(Probably) Queen Bee -Eater of Worlds, the sprite appears, but the gore does not match items that do not have an updated sprite: -Wood helmet -Meaty I'll keep this up to date as I find them. Most are fixed, and the missing sprites really shouldn't be reported. You should not waste your time with it Last edition: Jun 23, 2020 Works with 1.4 in general? hey this texture pack does not appear in my terraria as I properly install this? the package will not appear in my package menu. help Im tyne a noobie but how do I set up the texture pack? Hey, I'm trying to make the package work in my game, but it won't show up. does this work fr 1.4? or I'm doing something wrong. If Anyone knows how to do this, please let me know! I'm a little confused. Is this to be used with the Calamity mod, or vanilla? If it's for Vanilla, is it compatible with 1.4? Edit: You can confirm that it supports 1.4 to some extent. You seem to have some lighting problems. I formatted the file structure within the package to work with 1.4 to make it work. That's really just to be for vanilla, after all it's updated to 1.4, and it's supposed to make terraria look better I'm a little confused. Is this to be used with the Calamity mod, or vanilla? If it's for Vanilla, is it compatible with 1.4? Edit: You can confirm that it supports 1.4 to some extent. You seem to have some lighting problems. I formatted the file structure within the package to work with 1.4 to make it work. Do not download in the forum post. That's why it doesn't work That's really just to be for vanilla, after all it's upgraded to 1.4, and it's supposed to make terraria look better It can be used for both vanilla and modded, although its original purpose is to make vanilla fit with the Calamity Hey mod, I'm trying to get the package working in my game but it won't show up. does this work fr 1.4? or I'm doing something wrong. If Anyone knows how to do this, please let me know! See the messages above. Support questions go on the discord server, it is much easier and faster to help there. The most likely problem is that you have downloaded from the forum post See posts above. Support questions go on the discord server, it is much easier and faster to help there. The most likely problem is that you downloaded from the forum post Where do you find the link to the discord?, I can not find it Page 12 as I apply it to the game I put both files in resorce packages in terrairias files but when I open the game is not there and if I restart still there is as I apply it to the game I put both files in resorce packages in resorce packages in Files but when I open the game is not there and if I restart there are still no support questions go on the server discord. It is much easier and faster to help there, and has several guides for you can someone someone give me the package with the forum link and not the discord? I don't think you're going to want me to stalk... How Do I understand that. I put the folder in the right place, but nothing appears. Can someone give me the package with the forum link and not the discord? I don't think you're going to want me to stalk... Please? I'm playing tModloader and I'm putting 1.4 texture packs in the folder, but nothing happens. Please can you send me version 1.3? With the forum link? Can this texture pack work on tmodloader? Since the Calamity Texture Pack was released, I wanted to install it. But a problem. The forum page has set the installation link to discordapp.com. And I can't access it. Because? I'm not going to tell you. But, the texture pack (much) recently updated to 1.4, which made me want even more. So please, please can someone send me a forum link to it. Just send it to my comments profile. And make it a rulebook to send a forum link to a texture pack that doesn't yet have it, for people in need who are desperate, like me. P.S. Why am I so desperate? I asked this question: can someone send me a forum link to it, three times and no one cares. Then again, please. This post is specified for Niorin, the person who shared it on the forums, but if anyone could help, that would be great, thank you. Also, with this forum link, can anyone tell me in detail how to install and enable a tModloader texture pack? Because right now I have no idea. Last edit: Jul 28, 2020 So outdated the forum post! Simple! Please? that can not be done because only the creator of the forum post can change it. just join the discord and download it from there Yes, that's for sure. It's not like we didn't try to update it, or at least have the file removed. I'm sorry, it just didn't happen. Remember, you totally free to just leave after you have the package installed. Yes, that's for sure. It's not like we didn't try to update it, or at least have the file removed. I'm sorry, it just didn't happen. Remember, you totally free to just leave after you have the package installed. No. That's not the point. I can't participate. That's the problem! Oh, wait, I don't know what to do. That's all right. But still. For those who can't. No.
